

Naming Conventions

Python files should start with spelling_test_, for example, "spelling_test_GUI"

No single letter variables(x or a) identifiers should be relevant and easy to understand

sub-routines should also have relevant names

Use snake case for identifiers

Commenting

Variables should have a brief description of what they are

Sub-routines should also have brief descriptions on how they work and what parameters are used

Comment on new lines of code(not repeated lines with small changes)

Version Control

Publish most recent working version to the GitHub with a description of what's changed

At the start of the code include a "last edited on" statement

Task Assignment

Joe – TKinter UI and login code

Jacob & Liud—Backend and databases

Rowan—Audio repository and playing audio
